The encoded xylanase, and xylanases derived from Humicola, Thermoascus, Chaetomium, Mucor, Talaromyces, Malbranchea, Myceliophthora, Thielavia, Byssochlamus or Paecilomyces strains can be used in the monocomponent xylanase preparations of the invention. The xylanase preparations and the recombinant Thermomyces xylanase are useful as animal feed additives, which promote in-vivo breakdown of plant cell wall material and thus improve digestibility, growth rate and/or feed conversion
                                                                                                                                                                                                                                                                                                                                                                                                                   481
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     361

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         문
                                       The sequence encodes an endo-1,4-beta-D-xylanase from Thermomyces lanuginosus (Humicola lanuginosa), which may be used as a breadimproving additive. The enzyme may be expressed recombinantly from a plasmid pyES2.0 vector in Saccharomyces cerevisiae DSM 10133 (claimed), and may be added to flour at 5-5,000 (preferably 20-2,000) FXU/kg flour, optionally along with other enzymes (amylase, maltogenase, lipase, cellulase, hemicellulase, pentosanase, glucose-oxidase, laccase, protease and/or peroxidase). The enzyme combines particularly well with amylolytic enzymes, and may be used to improve baking properties of flour and/or dough, by increasing volume and improving texture, flavour, crumb softness, freshness and anti-staling properties, while improving dough machinability and stability.                                                                                                                                            밁
                                                                                                                                                                            δ
                                                                                                                                                                                                                                                                                                                 The invention relates to a variant xylanase polypeptide (I) or its CC fragment having xylanase activity, comprising one or more amino acid comodifications such that (I) or its fragment has an altered sensitivity to a xylanase inhibitor as compared with the parent xylanase enzyme. (I) or its coding sequence (II) is useful for degrading or modifying plant cell wall or for processing a plant material by contacting the plant cell wall or or for processing a plant material by contacting the plant cell wall or or plant material with (I) or (II). (I) is useful for modifying plant cell wall or processing wood and enhancing the bleaching of wood pulp. (I) is useful for processing wood and enhancing the bleaching of wood pulp. (I) is useful for altering the viscosity derived from the presence of hemicellulose or carabinoxylan in a solution or system comprising plant cell wall material. (C) is useful for preparing a foodstuff such as bread, pretzels, cockies, biscuits or crackers. The present sequence represents the coding sequence of Thermomyces lanuginosus xylanase A as compresent sequence of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        음 성 음
The invention relates to a Pichia cell comprising at least one copy of heterologous nucleotide sequence encoding a polypeptide of interest, where the codon usage of the sequence has been adjusted to match the preferred codon usage of P. methanolica. The invention also relates to a method for producing high yields of heterologous codon optimised polypeptide in a Pichia cell. The Pichia cell is useful for producing a polypeptide of interest, where the polypeptide is encoded by a nucleotide sequence heterologous to P. methanolica. The present sequence is Thermomyces lanuginosus codon optimised xylanase gene which is the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Thermomyces lanuginosus codon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAD17927 standard; DNA;

This plasmid and pJaL77 (imparting hygromycin B resistance) were used to transform protoplasts of A. foetidus NO953. The xylanase yield was 0.12 g/l. (Updated on 25-MAR-2003 to correct PN field.) beverages, textiles and detergents. Novel isolated Aspergillus fumigatus polypeptide, useful in industries such as those involved in the making of food and

Claim 2; Page 163-64; 169pp; English

CC useful for modulating the amount of cellulose in a composition. Compositions comprising glucose oxidase are useful for modulating the composition. Composition composition composition. Composition composition. Compositions comprising lipase are useful for modulating the amount of lactose in a composition. Compositions comprising lipase are useful for composition The sequences given in ABQ80319-66 encode enzymatic proteins derived fr A. fumigatus. The resulting proteins display the catalytic activity of enzyme such as tannase, cellulase, glucose oxidase, glucoamylase, phytase, beta-galactosidases, invertase, lipase, alpha-amylase, laccase polygalacturonase or xylanase. Compositions comprising the tannase are useful for modulating the amount of compounds that comprise a gallate ester linkage in a composition. Compositions comprising cellulase are derived from laccase an

Claim 2; Page 165-66; 169pp; English.

The sequences given in ABQ80319-66 encode enzymatic proteins derived from CC A. fumigatus. The resulting proteins display the catalytic activity of an CC enzyme such as tannase, cellulase, glucose oxidase, glucosemylase, CC phytase, beta-galactosidases, invertase, lipase, alpha-amylase, CC phytase, beta-galactosidases, invertase, lipase, alpha-amylase, CC polygalacturonase or xylanase. Compositions comprising the tannase are cuseful for modulating the amount of composition comprising comprise a gallate cuseful for modulating the amount of cellulose in a composition. Composition comprising the amount of glucose oxidase are useful for modulating the amount of myo-inositol phosphates in a composition. Compositions comprising comprising glucose oxidase are useful for modulating the amount of myo-inositol phosphates in a composition. Compositions comprising comprising phytase are useful for modulating the amount of compositions comprising beta-galactosidases are useful for modulating the amount of sucrose in a composition. Compositions comprising pha-amylases are useful for modulating the amount of composition. Compositions comprising comprising pha-amylases are useful for modulating the amount of compositions comprising comprising comprising the amount of plyceride in a composition. Compositions comprising comprising comprising the amount of plyceride in a composition. Compositions comprising comprising comprising the amount of plyceride in a composition. Compositions comprising comprising comprising comprising the amount of plyceride in a composition. Compositions comprising comprising comprising comprising comprising composition. Compositions comprising comprising comprising composition. Compositions comprising comprising compositions comprising comprising comprising compositions comprising comprising comprising comprising compositions comprising comprising comprising compositions. Compositions comprising patterns, and to raise anti-protein antibodies. The polypeptide having tannase activity increases the yield of tea liquor from tea leaves, improves the colour, flavour and health benefits of tea products, particularly an instant tea product. The polypeptide having cellulase activity enhances cleaning ability of detergent compositions express recombinant enzymes for characterization, modification or industrial uses, to compare with the nucleotide sequence of A.fumigatus to identify duplicated genes of paralogs having the same or similar biochemical activity and/or function, to compare with nucleic acid sequence of other related or distant fungal organisms to identify potential orthologous enzyme genes, for selecting and making oligomers for attachment to a nucleic acid array for examination of expression

pulp-bleaching; ds.
This sequence corresponds to a degenerate sequence encoding a xylanase precursor from Streptomyces olivaceoviridis. The sequence can be insert into the plasmid pQE60 to generate plasmid PERM P-16713 for expression e.g. E.coli. The xylanase is useful for the preparation of xylo-
